

How to use the basic features of iMovie

Adding video

Simply click on the video you would like to use and then press the arrow icon.

Settings/ options

From this menu in the bottom right corner you can add theme music or change the theme of the movie.

Pinching the videos

If you have 10 video clips in one movie you can pinch the videos so you don't have to scroll from beginning to end. You can also expand the video clips to be more accurate when editing the clip.

Adding audio effects to the movie

In this menu you have the choice to add sound effects, songs from the device, or theme music.

Editing the video

- ✦ To cut out any unwanted part of the video clip simply click on the clip and drag left until the unwanted scene is no longer visible.

Adding transitions

Transitions are added to the movie by tapping the icon in between two different clips.

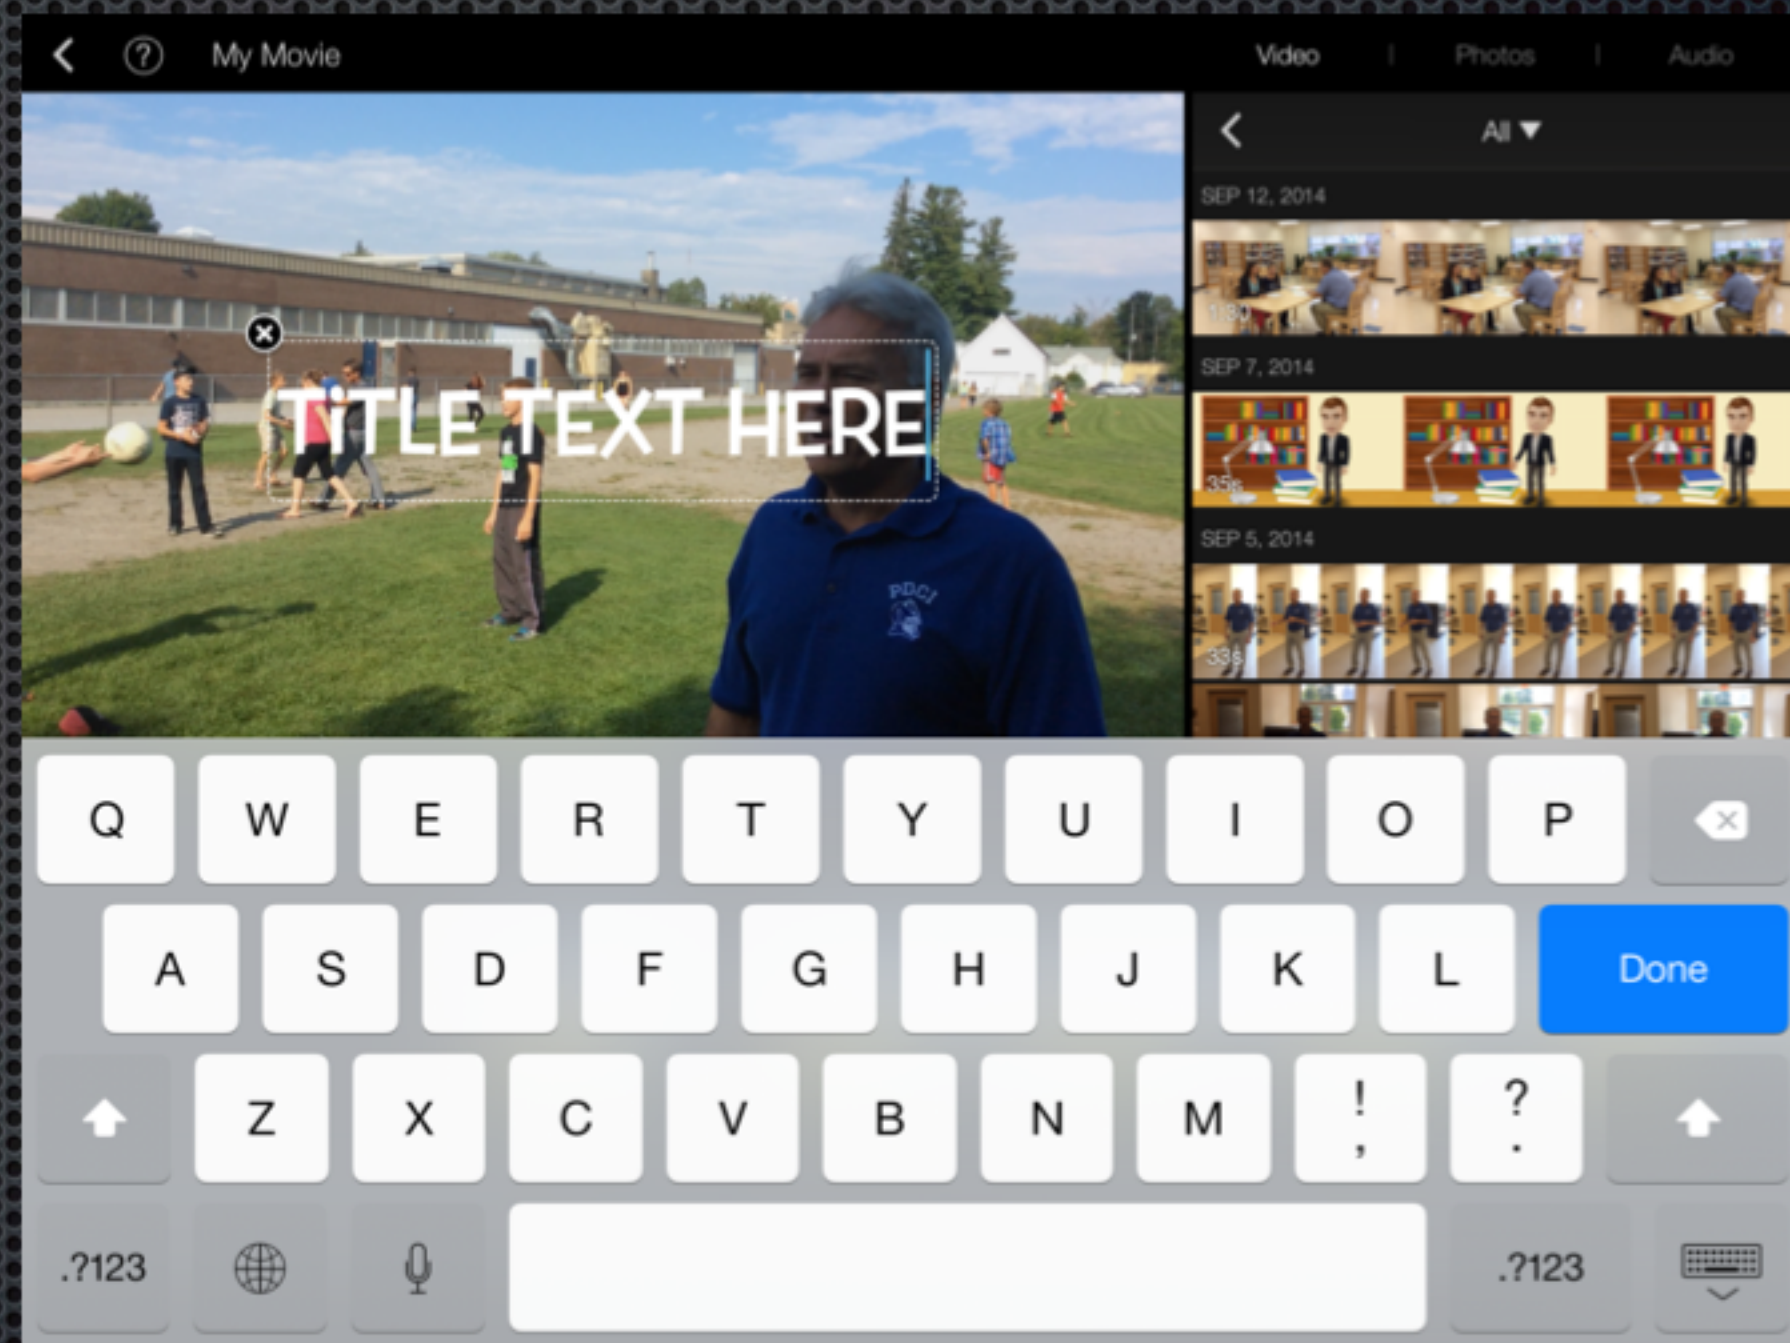

Creating an intro or conclusion.

Tap on the video clip and press title once in this menu you can add opening or closing slides with several different formats.

Adding content to the opening or concluding slides

- By tapping the text box in the opening or closing slide it allows you to change the text inside the box to what ever you want.

Exporting the video

- To export the video you must press the export icon but only when you are done editing.
- Once you have opened this menu you have the choice of uploading the video to your camera roll, YouTube, Vimeo, Airdrop, etc.
